

Product Roadmap

Published: 1st of October 2025

About this Roadmap

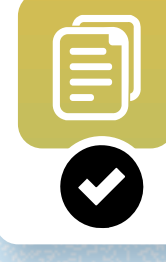

This Roadmap covers the 3 major product releases we will issue from Q4-25 until Q2-26. In the planning for each release we distinguish 3 categories of topics:

- ✓ **Committed** : Committed topics are confirmed as part of the release.
- ! **Planned** : Planned is expected in the current release, with the possibility of (partly) shifting to a later release.
- ⦿ **Envisioned** : Envisioned topics refer to features we anticipate to add to our platform but are not yet fully defined.

Fall

November 2025

Redesigned Reporting
The new reporting interface will now be included in all modules.

Redesigned Table Item Editors
Extra features for faster and easier usage. Selection from recently used items such as "roles" and a refined search in the mini property editor.

Redesigned Admin Center (phase 1)
Completely new Admin Center based on our new design guidelines for an improved user experience. Phase 1 will be a combination of old and new. Further improvements will follow.

Refactoring and features Process links
Improved performance and additional reporting to get better insights supporting your understanding of the process architecture.

New features Viewer
Users will be able to add certain diagrams to their "favorites" folder, and we further expanded on the improved search functionality.

Refactoring Image management
Enhanced performance for using images / customer uploads in diagrams.

Winter

February 2026

New features Report features
Additional functionalities such as filtering, sharing and adding reports to a new "favorites tab" for quick access.

Redesigned Mini-Property Editor
Users can now customize the mini-property editor in the Modeler, by grouping properties and the order of properties.

New features Process Architecture
Get better insights in the hierarchy of and relationship between processes.

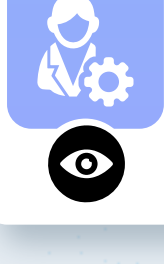

Refactoring Sharing
Rewrite of both the UI and server side functions to create and retrieve shared diagrams (for improved UX, maintainability, and preparation of future UX improvements).

Refactoring Process layout (phase 1)
Partial rewrite of the process layout module for improved maintainability and preparation for future features.

Beta AI Importing
Import documents with process descriptions and/or images/diagrams and import created diagrams into the Modeler.

Improvements SSO Synchronizing groups
Support for user list synchronization with Entra ID, mapping Engage Process user groups to AD groups.

Redesigned Publisher (phase 1)
Completely new Publisher. It will be based on User feedback and our new design guidelines for an improved user experience.

Redesigned Admin Center (phase 2)
In the second phase of the redesigned Admin Center we will focus on the redesign of Tables.

Summer

June 2026

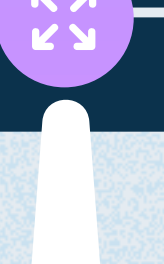

Support WCAG Viewer
WCAG A-level support for the new Engage Process Viewer.

Redesigned Authorization
Completely new dialogs to manage authorization based on our new design guidelines. It includes easier authorization management and authorization overviews.

Redesigned Evaluation (phase 2)
Partial rewrite of the process evaluation module for improved maintainability and future extensions.

Refactoring Process layout (phase 2)
Continuation of maintainability improvements and preparations for new features.

Redesigned Publisher (phase 2)
In the second phase the overview builder will get a refined interface.

Integration Office365 (Sharepoint)
Connect process steps to SharePoint documents and view SharePoint documents within the Modeler and Viewer.

Improvements Identity refactor
We will upgrade and refactor our identity server to support modern features like Windows Hello and Pass keys.

And beyond...

There are many more extensions and improvements that we consider for our platform. Time is going fast and resources are always limited. With the Roadmap we share our thoughts with our customers and partners. Don't hesitate to send in your wishes via the [Help button](#) in the platform.

Redesigned Notifications

Redesigned Teamboard

Integration AI / Copilot
Further study if and where AI could enhance features.

Integration Robot Process Automation
Robot Process Automation: Enhanced export of processes to (partner) RPA platforms.

Disclaimer

The Engage Process Roadmap describes product development efforts for the next 3 upcoming releases. Engage Process makes utmost efforts to achieve plans as described in this Roadmap but is always entitled to make (last minute) changes if circumstances so require.

Engage Process empowers your teams to explore and improve your processes together. The involvement and empowerment of the subject matter experts supports people driven change and is the basis for agile organizations and successful transformations.

Over 400 organizations in Europe and North America use Engage Process on a daily basis, including many local governments, financial and health care organizations, production and logistics.

Account Management

The Engage Process Roadmap Management team is available for you to discuss relevant process management developments in your organization and the position Engage Process can have. Feel free to contact your account manager and schedule time for a **re-introduction** of Engage Process in your organization. A broad session, preferably on-site, in which we share our latest process management insights, address experiences of other customers and interactively discuss the topics and goals of your organization.
